

COMMON UNITY = Community

EMPOWER PEOPLE TO LIVE, WORK AND PLAY SEAMLESSLY IN YOUR COMMUNITIES

WIRELESS ACCESS: THE SMART CITY FOUNDATION

In communities across the globe, citizens expect – and rely on – networking mobility. And in today's digital-first world, traditional, on-premises data centers are becoming secondary to distributed and virtualized data centers that include co-location facilities, public clouds and ever-growing Internet of Things (IoT) environments and endpoints. What's the key to keeping information flowing among these technologies? Reliable networking.

Hewlett Packard Enterprises (HPE) and Aruba provide trusted, smart-city-wide networking solutions. Here's a snapshot of how they meet the needs of communities like yours.

Deliver secure, enterprise-grade experiences that enhance efficiency, creativity and productivity.

Enable rapid data transfers and intelligence that help city planners create engaging experiences.

Extend access to services and applications for everyone in your community.

Provide robust wired and wireless solutions that help to ensure business, education, healthcare and government continuity.
